No. 1

FENNELL'S AN - ORCHID - A - MONTH CLUB

Offers a New Way to Buy Orchids at Discount

Our 'Orchid A Month Club' met with instant success among our many friends. The orders poured in and we were finally sold out of several of our specials of the last issue.

We have a goodly number of the present specials but we suggest that you place your order early to be sure that we will be able to fill it in full.

Full particulars of the Club are given on the reverse side of the application blank included with this issue.

The orchids for this quarter are:

NEWLY IMPORTED PLANTS	CLUB PRICE
1 Lead	2 Lead

January	Cattleya Lueddemannia	\$6.50	\$12.50
February	Diacrium Bicornutum	\$5.00	\$10.00
March	Oncidium Ampliatum	\$5.00	\$10.00

And to all of those who purchase all three of the above plants, we will include, free of charge, a plant of the lovely pure white Coelogyne sp. If you order 2 lead plants of the specials we will include a 2 lead plant of the Coelogyne.

Here's a chance to add four fine plants to your collection for the price of three and in addition to earn the liberal discounts offered by the club.

Please state in your order whether you want the plants shipped with or without pots.

FENORCO DEALERS WANTED - FRANCHISE OPEN IN MANY REGIONS

Some of you who know the great value of Fenorco Orchid Spray to orchid growers, nurserymen, and gardeners in general, may wish to make some money as Fenorco dealers.

You can become a Fenorco dealer by buying one case of 24 pints of the spray at a liberal discount from the retail price, or you may also add

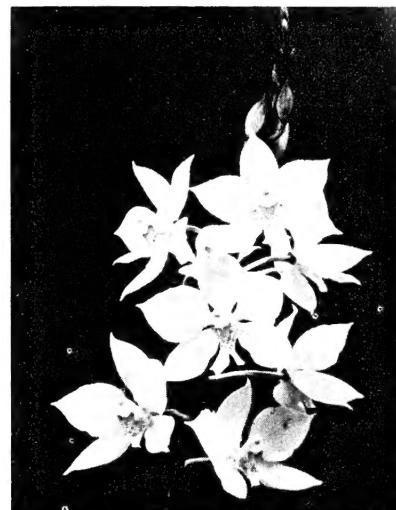

Photo by H. F. Loomis

DIACRIUM BICORNUTUM

The Virgin Orchid

One of the best of the pure white spray orchids - Diacrium Bicornutum - is easily grown, reasonable in price and the flowers are very useful for corsages, wedding bouquets, baskets, table decorations, etc. The flowers are about 2 inches in diameter and are borne on erect, terminal spikes. Each spike bears from 5 to 20 flowers generally in the spring.

The plant is native to Trinidad, Tobago and the coast of northeastern South America. It likes plenty of air, light and heat, and should be grown in the lightest, warmest part of the cattleya house. It is found growing in full sunlight, at times, and sometimes is also found in spots where it is periodically drenched with sea spray.

Continued on page 7

quarts and gallons to your stock.

It is relatively easy if you know a number of gardeners and orchid growers to make \$10 to \$50 per day by calling upon them and selling them on the merits of this wonderful material.

If you'd like a reason to call on

ORCHID SEED We Pioneered Its Sale

As the first firm to make a business of selling orchid seed, we have been breaking new ground constantly. How and how long to store it - what you, our customers, need and want - whether to sell the seed from stocks on hand or in advance of the ripening of the pod, are some of the many questions we have had to answer.

Out of our two years of seed selling experience have come some real facts, however, and principal among them is the fundamental that while an occasional lot of orchid seed can be kept almost indefinitely in a refrigerated dessicator, the great majority of lots deteriorate rapidly after they are a month or so old.

Phalaenopsis seed should always be sold in advance and planted as soon as received.

We have always recommended that seed should be ordered in advance and we shall continue to do so - In this way and only in this way can you be sure of getting fresh seed.

Also we feel that orchid growers are sincere, honest people, who do not complain regarding the quality of the seed they receive unless they have a legitimate reason. Therefore, we attempt to adjust each complaint to the satisfaction of the customer.

We use only the very finest possible parents - you can always be sure of the quality of our seed.

In selecting our stud plants, we keep in mind the following cardinal points: 1. Blooming season and probable effect on the progeny. 2. Size, color, shape and texture of the flowers of both parents and their probable effect as combined in the progeny. 3. Vigor of both parents.

Continued on page 7

all the orchid growers, nurserymen and gardeners in your region, here it is.

This offer is open to seedsmen, florists, druggists and orchid growers -- Write today for particulars -- We will gladly supply the details by return mail.

FENNELL'S ORCHID NEWS

Orchid Growing Notes

SEED DISINFECTION

Many of our readers have written us asking of our experience with seed disinfecting agents.

Our experiments with various disinfecting agents have so far shown us that both Chlorox and Peroxide are more caustic to orchid seed than is the Calcium hypochlorite solution we use. At any effective disinfecting solution these two materials killed most or all of the seed.

Our old standby, Calcium hypochlorite, is still the best thing we have found though we are still looking and will continue to do so.

We prepare our Calcium hypochlorite solution by stirring 10 grams of the chemical into 140 cc of water, to which has been added 5 drops of Hexylresorcinol (ST₂₇) as a wetting agent. We then filter the solution through 6 or 8 thicknesses of facial tissues (they're easier to get and cheaper than laboratory filter paper and do a quicker job.) The filtered solution is kept in a glass stoppered bottle until used but fresh solutions are made for use each day.

After shaking the seed in the solution fifteen minutes, we allow them to settle on the top or at the bottom of the solution as the case may be and then pour or draw off the hypochlorite, replacing it with sterile distilled water or sterile nutrient solution. We use either the water or the nutrient solution with about the same results though we believe the nutrient solution is a bit better than water. We use the same solution as in the jelly but omit the agar. We then plant the seed with a sterile medicine dropper.

Vanilla Planifolia

We were interested to read the other day, in the Bulletin of the American Orchid Society, that a number of people are trying to find plants of the commercial vanilla 'Vanilla Planifolia' or *V. fragrans*. We have a whole fence covered with this vine and can supply cuttings in almost any quantity. Good 30" cuttings are priced at \$3.00 each. Liberal discounts on quantity orders.

When in doubt about watering, don't.

A plant that's loose in the pot is on its way to the cemetery.

Poor drainage ---- Dead roots.

C. TRIANAE VAR NARANJA

This picture is a poor one but will give you an idea of this wonderful variety. This plant produced during the Christmas-New Year season six large beautiful flowers on one lead. We obtained \$6.50 each, wholesale, for the flowers. \$39.00 from one

plant is not bad and particularly for a species. In addition the plant carried a seed pod during the year. The variety is a strong, robust grower, producing many large flowers at Christmas. You will find Naranja mentioned often in our crosses.

THE NEW LOOK AND THE 'NEWS'

This issue of the 'News' is done by a new process to us, offset lithography, instead of letter press printing. The change was made necessary by the irregular and slow deliveries of our printer. We hope our many friends like our 'new look'

as it will mean more frequent and regular visits from the 'News'.

We will also have, in each issue, our plant, seed and flask price lists together with photographs of interesting plants and various articles.

WHAT OUR CUSTOMERS THINK OF US

Mr. Adolph C. Jordahn, Pres. of the South Florida Orchid Society, says - 'Fenorco D.D.T. Spray is good and it is effective. Follow directions closely.'

'I believe Fenorco to be the finest complete orchid spray that I have found.'

-- Florida

'Please send me another gallon of your good Fenorco Orchid Spray.'

-- California

'Using Fenorco Spray - Fine!'

-- California

'Community pot arrived in very good condition and am well pleased.'

-- California

'I have a couple of your cross #58 (seed) which makes my neighbor's winter grass look sick. I would recommend sowing lawns with your #58 if you would bring the price of the seed down just a little. The flasks would run about (and this is a very rough guess) I should say four to five hundred seedlings each.'

-- Alabama

'I think every Phalaenopsis seed must have come up. I am delighted.'

-- Florida

'The #87 are the fastest germinating seed I have ever planted; showing green in one week.'

-- California

'I believe Fenorco to be the finest complete orchid spray that I have found.'

-- Florida

'Please send me another gallon of your good Fenorco Orchid Spray.'

-- California

'Many thanks for the way my order of 100 bulbs of C. Lueddemannia arrived. They were in the best shape I have ever seen newly collected plants.'

-- California

'500 C. mossiae bulbs arrived in good shape.'

-- Illinois

'The way you packed the flasks for shipment and the care you gave them is something I haven't seen since I have been getting plants sent to me. They arrived in perfect condition and I surely want to compliment you.'

-- California

L. C. ALTESSE

A large, heavy textured floriferous hybrid blooming in March, April and May. Used often in our hybrids because of its wonderful shape, texture and blooming season. Its color is light flesh pink on the s&p deep crimson-purple marked with gold on the lip. It is a strong grower.

FENNELL'S ORCHID PLANT CATALOG - SPRING, 1948

	Not Potted per 100 bulbs	Per Case 800-1000 bulbs	Single Plants
			1 lead 2 leads 3 leads

CATTELEYA SPECIES - Good plants usually averaging about seven bulbs per lead - collected for us by collectors we know personally in South and Central America. Our many letters from satisfied customers bear out our contention that these are the best species offered anywhere today. We can quote special prices on orders of over 10 cases.

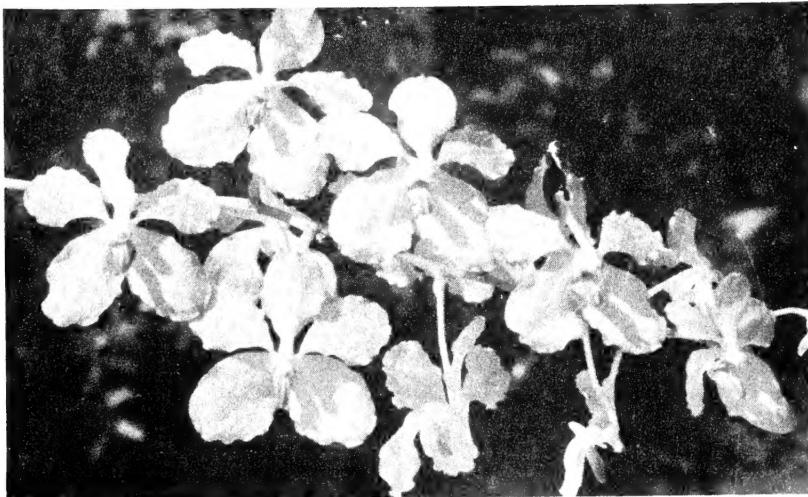

C. Trianae - Nov. - March. Best winter flowering species	\$80.00	.75 per bulb	\$ 7.50	\$15.00	\$25.00
C. Mendelii - May - June. Fine spring flowering, varies more than Mossiae	80.00	.75 per bulb	7.50	15.00	25.00
C. Schroederae - Feb. - April. Later than C. Trianae, generally very light colored, some nearly white.	75.00	.67½ per bulb	7.50	15.00	25.00
C. Gigas - May - August. The largest of all cattleyas, dark, free flowering and fine but sometimes considered hard to flower unless given a great deal of light.	80.00	.75 per bulb	7.50	15.00	25.00
C. Lueddemannia (C. Speciosissima) Jan. - April. Good shape, dark and strong growing if given plenty of light, sometimes considered difficult to flower if given too much shade.	65.00	500.00 per case	6.50	12.50	20.00
C. Mossiae - April - June. The best known spring flowering cattleya easy to grow and bloom.	75.00	650.00 per case	7.50	15.00	25.00
C. Gaskelliana - June - August. Generally considered easier to grow and flower than C. Gigas but not quite as floriferous or as large flowered if both are well grown.	70.00	600.00 per case	7.00	14.00	22.50
C. Skinneri - Feb. - April. Small, dark cluster cattleya, as many as 20 blooms each 2½" in diameter, showy and satisfactory.			5.00	10.00	15.00
C. Deckeri - Sept. - Nov. Fall flowering C. Skinneri.			5.00	10.00	15.00

ONCIDIUM SPECIES

Oncidium Lanceum - a robust growing species with large flowers, lip violet purple. S. & P. yellow spotted with chocolate, spikes branched, many flowered fragrant. Summer blooming.	\$5.00 per lead
Oncidium Ampliatum Majus - a large flowered yellow variety. Flower spikes branched, many flowered, very showy. Spring.	5.00 per lead
Oncidium Sphacelatum - a free flowering yellow variety, flowers smaller than the species above but borne more abundantly and in longer spikes. Spring.	3.50 per lead
Oncidium Ornithorynchum - small lavender flowers on many wiry stems, beautiful. Winter.	4 inch pot \$5.00

Vanilla Planifolia - 30 inch cuttings (not potted)

each \$3.00

VANDA CAERULEA

This beautiful and fine caerulea bloomed for us during the Christmas holidays producing twelve deep blue flowers on the one stem. *V. caerulea* varies in color from light to dark blue and is generally considered difficult to grow and bloom. It wants cattleya house conditions with a compost (changed yearly) of two-thirds osmunda and one-third oak leaves. With the above treatment our plants grow well and increase in vigor. Apparently vandas require more food than most other orchids.

VANDA SPECIES

<i>Vanda teres</i> - a free flowering semi-terrestrial species well adapted to fence culture in frost free regions. Requires full or nearly full sun light. Pink and rose flowers on good stems. Plants 15 to 25 inches tall.	each \$7.50
<i>Vanda caerulea</i> - The best blue orchid, rather difficult to grow but does well if handled right. These are newly collected plants available in April or May.	Plants not in pots each \$12.50 Plants established in pots by us each 17.50 (Available in August-September)
<i>Epidendrum Cochleatum</i> - the cockleshell orchid. S. & P. light green, lip shell-like, inverted and deep purple.	4 inch pots each 3.50
<i>Epidendrum Tampense</i> - small flowers on spray, S. & P. greenish yellow, lip lavender and white. Several sprays make an attractive corsage.	4 inch pots each 3.50
<i>Epidendrum Fragrans</i> - somewhat like <i>Cochleatum</i> but lip white streaked with violet, fragrant.	4 inch pots each 3.50
<i>Brassavola Glauca</i> - heavy, waxy, greenish white.	4 inch pots each 5.00
<i>Brassavola nodosa</i> - white, scented at night.	4 inch pots each 5.00

READY IN APRIL OR MAY - NEWLY IMPORTED PLANTS NOT POTTED

DENDROBIUM SPECIES

<i>Dendrobium Formosum Giganteum</i> - a large white flower, good for cutting one of the best Dendrobes. Rare.	Per Plant .10.00
<i>Dendrobium Aggregatum</i> - small, compact plant, flowers 8 to 20 on wiry stems, bright orange. Showy.	Per Plant .6.50
<i>Dendrobium Brymerianum</i> - A fine yellow, similar to but stronger growing than the following.	Per Plant 10.00
<i>Dendrobium Fimbriatum Oculatum</i> - tall growing, flowers in long spikes from tops of old bulbs, bright orange color with two dark brown eyes in throat, lip lace-like.	Per Plant 12.50
<i>Dendrobium Chrysotoxum</i> - Flowers orange-yellow in dense spikes from top bulbs.	Per Plant 10.00
<i>Dendrobium Thrysiflorum</i> - A splendid species S. & P. white, lip orange, flowers in long spikes, drooping spikes.	Per Plant 10.00
<i>Dendrobium Hookerianum</i> - Stems pendant, flowers orange, from nodes, very showy.	Per Plant 15.00
<i>Dendrobium pierardii</i> - Long dropping bulbs, white and lavender flowers from nodes along old n bulbs. 3 inch size only with 15 inch stems - In Pots	Per Plant 5.00
<i>Laelia Anceps</i> - Like small cattleyas. Generally considered sure Christmas bloomer north of the Gulf States. Fall blooming in Florida and Gulf States.	Per Plant 6.50
<i>Laelia Anceps Sandersoniana</i> - a lovely alba form with white S & P lip with markings of purple.	Per Plant 25.00

PHAIUS SPECIES - Available in April or May - Newly Imported not potted

<i>Phaius Grandifolius</i> - An easily grown terrestrial. Flowers on tall erect spikes, tan S & P. purple lip. One of the finest terrestrials and easily grown in frost free gardens.	Per Plant 10.00
<i>Phaius Maculatus</i> - similar to above but larger and rarer. Leaves speckled with white.	Per Plant 10.00
<i>Phaius Mishmensis</i> - Pseudobulbs long, stem-like, flowers rose pink.	Per Plant 10.00
<i>Phaius Wallichii</i> - Like a giant grandifolius.	Per Plant 10.00

READY NOW - IN POTS

	Single Plants		
	1 lead	2 leads	3 leads
<i>Diacrium Bicornutum</i> - One of the finest white spray orchids, easy to grow.	\$ 5.00	\$18.00	\$15.00
<i>Peristeria elata</i> - The famous Holy Ghost Orchid	5.00	10.00	15.00
<i>Stanhopea tigrina superba</i> - Very large, showy and fragrant	6.50	12.50	
<i>Sobralia macrantha</i> - Large purple ground orchid, very fine	5.00	10.00	
<i>Sobralia leucoxantha</i> - Pure white	5.00	10.00	
<i>Sobralia macrophylla</i> -	5.00	10.00	15.00
<i>Bletia patula</i> - Beautiful spikes of violet flowers. Terrestrial	3.50	5.00	
<i>Coelogyne</i> sp. - Beautiful pure white. Grows with Cattleyas	5.00	10.00	
<i>Cattleya Trianae</i> II - Established plants from our collection	8.50	per lead	
<i>Cattleya Trianae</i> III - Better varieties as above	12.50	per lead	

L. C. BACH-AGA

This very floriferous and beautiful hybrid produced seven flowers, all of top quality, for use on one lead, during the year. It bloomed in June and again at Christmas. Its size is large, 8 inches wide, its substance very heavy and its color an attractive light lavender on the s & p suffused with gold. The lip is large and deep purplish crimson and gold. The plant is very strong, as, in addition to its flowers, it also produced a seed pod during the year. These flowers brought us \$7.50 each wholesale at New Years and \$5.00 in June.

CATTLEYA HYBRIDS - Ready for immediate delivery

B200 - C. Clementine Goldfarb x C. Eucharis - Both parents pure white winter blooming, strong growing, should be fine	$\frac{1}{2}$ inch pots \$ 5.00	\$ 7.50 ea.
R149 - C. Amanic x C. Angelina - white with colored lip, both parents outstandingly fine	3 inch pots 10.00	12.50 ea.
R145 - (Lc Pamela x C. Gatton Ruby) x Bc Hartland - Both parents large fine, dark winter blooming	$\frac{1}{2}$ inch pots	7.50 ea.
R212 - C. Edithiae x (Lc Lady Veitch x C. White Empress) - Both parents pure white, winter blooming, very fine	1 $\frac{1}{4}$ inch pots - ten plants for	3.50 ea.
R213 - C. Nutley alba x C. Priscilla alba - White S & P colored lip, large and fine, spring blooming	1 $\frac{1}{4}$ inch pots - ten plants for	3.50 ea.

CATTLEYA HYBRIDS - COMMUNITY POTS - IMMEDIATE DELIVERY

F863 - (Lc Elissa x Lc Valencia) x C. Fabia - Both parents very fine and dark, blooming season various	2 $\frac{1}{4}$ inch pots, 15-25 plants	\$ 25.00
F864 - Bc Penelope - One of the largest brassocattleyas. These should be large and fine, both parents were excellent.	3 inch pots, 25-40 plants	30.00
F882 - (Lc Pamela x C. Gatton Ruby) x Lc Sam Houston - Both parents very fine, large, and dark, winter blooming	2 $\frac{1}{2}$ inch pots, 15-25 plants	\$ 25.00
301 - Blc Dorothy Fennell x C. Bowringiana var. Purple Princess. The Dorothy Fennell was very large and dark while C. Bowringiana Purple Princess is violet colored, a very strong grower and produces up to 25 flowers per spike. Should be fine, strong, dark and floriferous.	10-12 plants per pot	12.50
G853 C. Trianae alba var. Souvenir de L. Verdonck x Bc Seafom. Should make a very fine pure white brasso, only a few of these	1 $\frac{1}{4}$ inch pots	5.00 ea.
R 157 - C. Ella Mae Sutton x C. trianae alba. Both parents large pure white, winter blooming, fine	1 $\frac{1}{4}$ inch pots each	\$ 3.50
	1 $\frac{1}{4}$ inch pots per 10	25.00
	1 $\frac{1}{4}$ inch pots per 100	225.00
	2 inch pots each	5.00
	2 inch pots per 10	40.00
	2 inch pots per 100	350.00

81 - C. Leda x C. Gigas. Leda is winter and spring blooming, very dark, fine shape. Gigas is dark, large, fine, very floriferos, spring and summer blooming. These seedlings will probably bloom the year around like Enid. Should be very fine and useful.

B 848 - C. trianae alba x C. Odalisque alba. Both parents fine, winter blooming pure white

B 850 - C. White Empress x C. Odalisque alba. Both parents fine pure white, winter blooming

2 inch pots each	3.50
2 $\frac{1}{2}$ inch pots each	6.00

2 $\frac{1}{2}$ inch pots each	6.00
3 inch pots each	10.00

1 $\frac{1}{4}$ inch pots each	3.50
--------------------------------	------

PHALAEOPSIS HYBRIDS - PURE WHITES

Phalaenopsis Doris - The most famous of all the pure white Phalaenopsis. Flowers heavy and long lasting. Usually about 10-20 very large flowers on an unbranched spike. This is the original strain. Plants in 3 inch pots - leaves 2 $\frac{1}{4}$ inch to 3 $\frac{1}{2}$ inch across longest dimension of plant	each	\$ 7.50
Phalaenopsis Elizabethiae x P. Benson's 18 - Two very fine and large, heavy whites. These seedlings should be some of the very best. Plants in 1 $\frac{1}{4}$ pots, leaves 1 inch to 1 $\frac{1}{2}$ inch across longest dimension of plant.	each	3.00
Community pots of above 10-12 plants	each	25.00
Phalaenopsis Elizabethiae x P. Katherine Seigwart - Both parents large, heavy and pure white. Usually bloom for Easter. 15-25 flowers per spike. Plants as above in 1 $\frac{1}{4}$ inch pots	each	3.00
Phalaenopsis Confirmation x P. Katherine Seigwart - The Confirmation used here is white and very early blooming, large and fine. The Seigwart is our earliest flowering one. These should bloom for Christmas or in January. Plants in 1 $\frac{1}{4}$ inch pots.	each	3.00

C. FRED SANDER VAR GLORIOUS

A very strong, large, deep colored cattleya that blooms at Christmas for us. Flowers deep purplish lavender with deeper lips, substance heavy. The plant and flowers are large, strong, and fine. These blooms brought \$8.50 each wholesale at New Year's.

Phalaenopsis Psyche x P. Elizabathiae - This should be very lovely. Psyche is very large, pure white and has a pronounced wave in the edge of the petals. Elizabathiae is equally large with a slight wave in the petals. Should bloom April - June. Plants in 1 1/2 inch pots.

each 3.00
Any of the above or a collection except Doris 10 plants 25.00

PINKS - LARGE FLOWERS

Phalaenopsis Pamela - A very fine large medium to large dark pink - one of the best.

1 1/2 inch pots each 2.50

Phalaenopsis Pamela Pink Glory x P. Hawaii - Two fine pinks, both large and colorful.

2 1/2 inch pots each 5.00

Phalaenopsis Pamela Pink Glory x P. Stuartiana - Should produce medium to large pink flowers on branched spikes.

1 1/2 inch pots each 2.50

Phalaenopsis Reve Rose x P. Schilleriana - Reve Rose is the largest, darkest and finest pink we have seen and the Schilleriana used here is very dark and large for this species. This should be very fine.

2 1/2 inch pots each 5.00

1 1/2 inch pots each 3.00

2 1/2 inch pots each 6.00

Phalaenopsis Fontain bleu x P. Schilleriana - (P. Hawaii) A very fine pink - Varies in color but some should be very dark.

1 1/2 inch pots each 2.50

Community pots 10-12 plants 20.00

Phalaenopsis Amabilis x P. Stuartiana - Should make a fairly large light pink with many flowers.

1 1/2 inch pots each 2.50

Community pots 10-12 plants 20.00

Collection of 10 of the above including not more than one of the Reve Rose Cross.

1 1/2 inch pots - 10 plants 22.50

2 1/2 inch pots - 10 plants 40.00

VANDA HYBRIDS

Vanda Miss Joachim - Tall with quill-like leaves, flowers showy pink, needs full sun, grows well on fences in frost free regions. Plants in 4 inch pots, 15-25 inches tall

each 7.50

Vanda Flammerole - Bluish-purple flowers, strong growing, easier to grow and flower than Caerulea. Very beautiful 8 inch pot

each 35.00

ONCIDIUM HYBRIDS

Oncidium Goldiana - A fine bright yellow spray, spring blooming, easily grown. 4 inch pots

each 5.00

SPECIAL COLLECTIONS

One each of the 23 Cattleya, Phalaenopsis, Vanda and Oncidium hybrids listed above, except V. Flammerole, minimum size pots as quoted. Value \$92.00. Special Offer.

The Collection 80.00

One each of the 24 Cattleya, Phalaenopsis, Vanda and Oncidium hybrids listed above, including V. Flammerole, Maximum size pots as quoted. Value \$143.00. Special Offer.

The Collection 125.00

ALL PRICES QUOTED ARE FOR CASH WITH ORDER EXCEPT FOR NEWLY COLLECTED SPECIES IN WHICH CASE THE ORDER SHOULD BE ACCOMPANIED BY A PAYMENT OF 50% OF THE VALUE OF THE ORDER --

THE REMAINDER TO BE PAID UPON RECEIPT OF THE PLANTS.

Fennell's "An Orchid a Month Club" members can purchase any or all of the plants of the month mentioned in each issue of the "News", or they may select any other plants or seed from our current lists.

If the member purchases a total of \$50.00 or more in plants or seed during any contiguous 12 months period he is entitled to premiums payable in plants or seed as follows:

\$ 50.00 to \$100.00 per year -	5% premium
\$100.00 to \$500.00 per year -	10% premium
\$500.00 or above per year -	$12\frac{1}{2}\%$ premium

We also offer special premium plants from time to time, as awards to our regular members.

VIRGIN ORCHID - Continued

I have seen it growing in great masses on the enormous limbs of Suman trees in Venezuela. There it was protected by only a sparse high shade. Thousands of plants in bloom at the same time, their spikes nodding and waving in the tropical breeze, make a wonderful sight. The first tree I saw so decorated was, I thought, covered with thousands of its own blooms - I could see it standing out on the hillside nearly a half mile away - a gnarled old giant with wooly white limbs against the green of the hillside.

As I came nearer I saw it to be, really, a tree covered with thousands of lovely Virgin orchids. I photographed it but, unfortunately, the picture does not do its subject justice.

The Virgin orchid should be in every collection where cattleyas are grown. It is not well known primarily because it has been very difficult to obtain. We have nice plants of it now and at least for the present it is available.

Some people carefully and laboriously scrub the scale off their orchids --- others use FENORCO.

ORCHID SEED - Continued

For several years we have been charting the effect our various stud plants have on their offspring and hope eventually to have a pretty clear record of the various results we can expect.

In general, however, we try to cross advanced hybrids with fine varieties of species to set the blooming season with the species and to obtain the good points of the hybrids. For instance, there are very few good round, wide petalled Mossiae but Mossiae blooms at a very important season so we cross it with wide petalled, heavy textured hybrids like LC Altesse which also blooms in the late winter and spring.

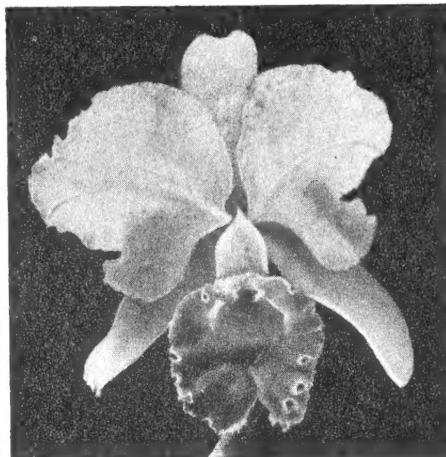

If you want to be sure of the quality of the parentage used in producing your orchid seed buy it from us - we are the only concern in the country making a large scale business of producing orchid seed for sale.

Orchids are strong, easily grown plants that'll stand most anything and usually have to.

Chief orchid pests --- in reverse order --- Thrips, slugs, scale and Aunt Emmy with the hose.

Nice tall dark green plants mean much tying up and few blooms.

Orchid seed is as good as the firm behind it.

C. TRIANAE VAR MARY FENNELL

We believe this to be the finest trianae variety ever found. Color of s&p deep glowing lavender, lip deep crimson purple with gold throat, substance heavy, shape large and round. The petals are touched on the end with the deep crimson of the lip. Flowers at the holiday season and produces its flowers in twos and threes. Plant very strong growing usually producing two flowering bulbs per lead. Used widely in our crosses. These flowers brought \$6.50 to \$7.50 each at New Year's.

Cluster and Spray Cattleyas A New Trend in Orchid Breeding

The cluster cattleyas C. Bowringiana, LC G. S. Ball, C. Maxima, C. Superba, C. Deckeri, C. Skinneri, and C. Guatemalensis with Laelias anceps and purpurata when crossed with large cattleyas and hybrids, produce very beautiful and saleable flowers. Generally speaking, these flowers are from $\frac{3}{4}$ to 6 inches in diameter and are borne in sprays or clusters of from four to ten or twelve flowers.

These flowers are admirably adapted to corsages and generally bring from one-half to two-thirds the price of the large hybrids - as a result the plants are often more profitable than even the best large flowered hybrids.

They give interesting variation to the usual orchid fare and are recommended for every collection, but particularly for those with retail sales outlets who want and need something different but not too expensive to offer their customers.

The seedlings of these crosses are usually strong and fast growing.

We are crossing cluster Cattleyas and Laelias with some of our best and largest varieties of Brasso-cattleyas, Laelio-cattleyas, and Cattleyas and expect some very fine things from them.

We have seed, flasks and community pots of crosses of this type in our present offerings.

Flasks Available For Immediate Shipment

We have a few flasks of the following crosses available for immediate delivery in the South and Southwest and for March 15-April 1 delivery anywhere. State in your order when you want shipment made:

No. 753 - Lc. G.S. Ball (yellow) x L. Purpurata Alba
